

Analysis of the shortcomings of solar panels in enterprises

Overview

The authors found that only a few investigations have been performed on the success of Chinese PV companies in terms of inventiveness and the classic or the two-stage DEA model are the approaches utilized. Due to the alarming environmental damage instigated by the use of traditional energy.

2.1. Enterprise efficacy evaluation method

According to established research approaches for assessing an enterprise's innovation efficacy, stochastic frontier analysis (SFA) or 3.1. Three-stage DEA model

Stage 1: Traditional DEA Model

The classic DEA model is used in the first step of the computation, which ignores the impact of external environment.

4.1. Stage 1: Empirical results of the traditional DEA model

The standard DEA model is employed to assess the innovation efficacy of 30 Chinese solar firms. Calculating the mean innovation efficacy of China's 30 solar enterprises without taking into consideration the impact of external factors results, it is discovered that the average innovation
