

Castrie low temperature lithium battery

Overview

Modern technologies used in the sea, the poles, or aerospace require reliable batteries with outstanding performance at temperatures below zero degrees. However, commercially available lithium-ion batteries (LIBs) components at low temperatures is provided. Energy storage devices play an essential role in developing renewable energy sources and electric vehicles as solutions for fossil fuel combustion-caused environmental is. Low ambient temperature causes a significant cell resistance and polarization, leading to a lower state of charge (SOC, defined in %, where 100% means the maximum numbe. 3.1.
